ANUSHA BHARATI

Software Engineer | AI Engineering | Full-Stack Development

B2B SaaS | AI Application Development | LLM Workflows

Cheltenham, UK | +44 7880192194 | anusha.bharati085@gmail.com | LinkedIn | GitHub | Portfolio

Professional Summary

Software Engineer with 7+ years of experience designing, delivering and supporting business-critical software across B2B SaaS, billing, financial services, ERP and higher education. Owns delivery from requirements and solution design through full-stack development, testing, release and production support using C#, ASP.NET, Angular, TypeScript, Python, FastAPI, GraphQL, SQL Server and Azure.

Strong background in technical ownership, solution architecture, stakeholder collaboration, peer reviews, mentoring and end-to-end product delivery, with proven success delivering business-critical billing and financial platforms. Hands on AI engineering experience developing LLM-powered applications, structured AI workflows and validated outputs, combining data processing with AI to build maintainable solutions that solve complex business problems. Completed the Building with the Claude API certification, strengthening practical knowledge of building applications with large language models.

Technical Skills

- **Programming:** Python, C#, TypeScript, JavaScript, SQL, PeopleCode, HTML5, CSS3
- **Frontend:** Angular, RxJS, Apollo GraphQL, Bootstrap
- **Backend and APIs:** ASP.NET, FastAPI, Entity Framework, GraphQL APIs, REST APIs, business workflow automation
- **Databases:** Microsoft SQL Server, query optimisation, stored procedures, relational data modelling
- **AI and Data:** OpenAI API, LLM application development, AI workflow orchestration, prompt engineering, structured outputs, Pydantic, JSON Schema validation, research-paper retrieval and ranking, data ingestion and transformation, Power BI, Alembic
- **Cloud and DevOps:** Azure, Azure DevOps, Docker, Git, CI/CD pipelines, release management, production support
- **Engineering Practices:** System design, SOLID, OOP, microservices, performance optimisation, automated testing, Agile delivery
- **Certification**: Building with Claude API certification by Anthropic.

Education

MSc. Computer Science - University of Bath (2021–2022)
Bachelor of Technology in Electronics Engineering - UMIT, SNDT (2014–2018)

Professional Experience

Software Developer | Brave New World | Dec 2022 – Present

- Work across multiple Azure-hosted B2B SaaS products, building and evolving business-critical software used by external business customers across billing, financial processing, reporting and operational workflows.

- Conducted peer code reviews to maintain code quality and consistency, reviewed and approved deployment pipelines, and mentored junior developers by providing technical guidance, sharing best practices and supporting their development.
- Own the development and end-to-end delivery of significant product features, from requirements and solution design through architecture, full-stack development, testing, deployment and production support, making technical decisions independently and collaborating with stakeholders on product direction.
- Designed and delivered major areas of a complex Managed Billing platform spanning customer billing, product catalogues, tariffs, invoices, fixed charges, CLI allocations, data upload infrastructure, costing, financial reporting, operational dashboards and automated business workflows.
- Work directly with billing leaders, finance teams, operational stakeholders and end users to understand business problems, challenge requirements where appropriate and translate them into practical technical solutions and delivery priorities.
- Owned the design and development of a customer data ingestion and validation workflow, processing CSV data through automated schema and business rule validation, transformation, exception handling and downstream billing APIs. Surfaced actionable validation errors to users before processing, eliminating 5 days of manual work per billing cycle and reducing post-import support requests.
- Architected and delivered self-service Reset and Recost Suspense workflows that allow business users to initiate costing processes, monitor progress and resolve validation failures independently, reducing reliance on engineering teams and accelerating financial processing.
- Designed and developed secure operational dashboards providing real-time visibility into billing performance, invoices, financial metrics and KPIs, including role-based access and self-service functionality for business users.
- Built Invoice and Margin Reporting products used by finance teams to investigate billing accuracy, analyse profitability and complete financial sign-off at the end of billing cycles.
- Delivered full-stack functionality using Angular, TypeScript, C#, ASP.NET, GraphQL and SQL Server while managing source control, CI/CD pipelines, releases and production support through Azure DevOps and Git. Also delivered analytics on Power BI dashboard for finance team.

Data Administrator Analyst (Part-Time) | University of Bath | Nov 2021 – Oct 2022

- Managed academic datasets through data entry and validation, reporting and quality assurance.
- Collaborated with university stakeholders to maintain accurate course information and improve data integrity.

Application Development Analyst | Accenture | Dec 2020 – Sep 2021

- Led development activities across enterprise financial applications while maintaining code quality and consistency, peer reviewed code and mentored 3 junior developers.
- Owned end-to-end delivery of software enhancements from requirement analysis through development, testing, deployment, and production support.
- Investigated production issues, performed root cause analysis, and implemented permanent technical solutions.
- Received the Accenture Celebrates Excellence Award for outstanding project delivery and exceptional client satisfaction.

Application Development Associate | Accenture | Nov 2018 – Dec 2020

- Developed enterprise applications using Oracle PeopleSoft FSCM, SQL and PeopleCode.
- Performed testing, production support and deployment activities.
- Worked across Accounts Payable, Accounts Receivable, Purchase Orders and General Ledger modules.

- Promoted to Application Development Analyst for my outstanding work.

Key project highlights

BuzzSieve | Independent AI Research Platform
Python | FastAPI | OpenAI API | Pydantic | Docker

- Designing and building an AI-assisted research platform that retrieves fitness-industry research papers and transforms relevant findings into structured, reusable research briefs.
- Developed modular FastAPI endpoints and an orchestrated AI workflow covering paper retrieval, ranking and filtering, prompt construction, LLM integration and response handling.
- Integrated OpenAI Structured Outputs with strict Pydantic and JSON Schema validation to produce consistent, machine-readable responses for downstream processing.
- Implemented automated testing, error handling, evaluation and observability to improve reliability, assess output quality and track workflow performance.
- Containerized the application with Docker and established a maintainable foundation for secure configuration, reproducible execution and future deployment.

Enterprise Billing Platform
Designed and delivered a large-scale enterprise billing platform supporting invoice generation, tariff management, product catalogues, customer billing, and financial processing through scalable full-stack development.

API-Driven Business Processing
Designed multiple infrastructure services supporting Data Upload, Reset, and Recost Suspense workflows involving complex financial validations, business rules, API integrations, and automated processing.
